Ed joined the School of Accountancy at Southern Illinois University during Fall, 2009. He teaches courses in financial statement assurance, internal control evaluation, IT governance, and experimental accounting research methods. Ed's research examines how people use accounting information to make decisions. He uses theories from cognitive psychology as a framework for examining how characteristics of the decision maker and variables in the decision environment influence professional judgment and diagnostic reasoning in accounting contexts. Ed earned a PhD in accounting from the University of North Texas in 1995, but he was a practicing accountant for 14 years before entering the doctoral program. Ed started his career as auditor for an international accounting firm, served as controller for a diversified food service and retailing company, then practiced public accounting as a sole proprietor. Prior to joining Southern Illinois University, he was member of the accounting faculty at Mississippi State University, Arizona State University, and the University of Kansas.
